

Isaias Silva

Senior QA Engineering Lead | Test Automation | Entrepreneur

Lauro de Freitas · Bahia, BR | qa.eng.isaiasilva@gmail.com | linkedin.com/in/isaiasilva | github.com/isaiasilva

Executive Summary

Senior QA Automation Engineer with +15 years of experience across fintech, health-tech and digital retail ecosystems. Tech lead at Foxbit Exchange safeguarding Web, Mobile and mission-critical API platforms through scalable automation architectures (Cypress, Playwright, Maestro, Appium) and CI/CD pipelines. Early adopter of LLM-Assisted Testing and AI-agent development (Claude Code, MCP), applied end-to-end in production products. Founder of ISSQA and of the startups WasteZero (CTO, Top 5 at ExpoFavela Bahia 2025), Juntix (collaborative-credit fintech) and CRUZZO (P2P marketplace with escrow payments), combining test strategy, agile squad leadership and product vision to reduce business risk and accelerate delivery. Proven expertise in performance testing (k6, JMeter), REST API testing, BDD (Cucumber) and observability.

Technical Stack

AI-Assisted QA & Agents: AI-Assisted Testing (LLM Test Generation, MCP), AI Agents for Dev & QA (Claude Code, GitHub Copilot, Cursor), AI-Powered Process Automation (n8n, Evolution API, WhatsApp Chatbots).

Web/API Automation: Playwright, Selenium / Playwright, Cypress, Postman / Insomnia, Test Automation.

Mobile Automation: Appium.

Performance & QA Strategy: QA Strategy & Techniques, Gherkin / BDD, Performance Testing.

Languages & Frameworks: Programming Languages.

DevOps & CI/CD: Docker & Containers (Docker, Easypanel, VPS), Cloud & Deployments, Version Control (Git), CI/CD Pipelines.

Databases: Databases.

Soft Skills: Methodical, Organized, Commitment & Ownership, Empathy, Communication, Goal-Driven, Detail-Oriented, Quality-First Mindset, Proactivity, Teamwork, Leadership & Mentoring.

Professional Experience

Founding Partner · QA & Dev Consultancy — Contract — ISS Software Quality Solutions

12.2020 · Present

ISS Software Quality Solutions is my own consultancy (registered company) specialized in Software Quality and Development. As founding partner, I work from architecture design through delivery, applying a rigorous testing framework — automation, performance and reliability — to every project. It is under ISSQA that in-house products such as WasteZero and Juntix are born and scaled, alongside specialized QA and software engineering consulting for institutions like IBBI. Whether an in-house product or external consulting, the commitment is to deliver secure, scalable solutions with test-driven technical excellence.

Founding Partner & Tech Lead (Full-Stack / AI) — PJ — Juntix

02.2026 · Present

SaaS platform incubated at ISSQA. As founding partner and tech lead, I designed and built the entire architecture under a maximum-efficiency premise, with Artificial Intelligence across every stage of the development cycle. Highlights — Architecture & AI: a pioneering workflow in which 100% of the application (back-end and front-end) was built with AI agents, speeding delivery without compromising quality; Full-Stack: technical leadership of back-end and front-end, delivering a scalable, responsive, user-centered SaaS; Infra & DevOps: container management and continuous deployment (EasyPanel + Hostinger) with high availability and low cost; QA & Quality: rigorous automation and E2E testing to ensure transaction integrity and data security; Business: product roadmap, payment-gateway integration and regulatory compliance.

Co-Founder & CTO — PJ — WasteZero

11.2023 · Present

Circular-economy startup incubated at ISSQA. As founding partner and CTO, I led the technology strategy and end-to-end development of the platform — from infrastructure to launch at scale. I worked hands-on on a robust ecosystem with a scalable API and Flutter apps for both the corporate and client environments, driving the full software lifecycle with CI/CD and continuous deployment. Beyond technical leadership and team management, I represented the startup on innovation stages and investment rounds: Top 5 at ExpoFavela Bahia 2025 (representing the state at the national stage in São Paulo), NEON 2025 (Arena Web Summit) and BTX25 — building partnerships and pitching the business model to investor panels.

Senior QA Automation Engineer (Web & Mobile) — PJ — Foxbit Exchange

09.2022 · 05.2026

Senior QA Automation Engineer with a strong track record in the digital-asset market at Foxbit, specialising in quality assurance for complex financial ecosystems (Web, Mobile, APIs). Drive mobile automation with Maestro Studio and web automation with Cypress and Playwright, delivering full end-to-end coverage. Design advanced test scenarios and lead agile ceremonies, using Jira for defect management and risk control. Combine deep programming expertise and test architecture knowledge to raise the reliability of financial products, with focus on performance, release stability and cross-functional collaboration.

Senior QA Engineer — CLT — Grupo Casas Bahia

05.2021 · 09.2022

Strategic role as Senior QA Engineer ensuring quality across high-scale critical ecosystems, focused on Web, Mobile and API microservices architectures. Owned the full QA cycle, from test plans and acceptance criteria to implementation and maintenance of robust automation frameworks, accelerating the delivery pipeline and release reliability. Specialist in software sustaining engineering, acting directly on root-cause analysis and incident mitigation in production, embedding continuous testing into the agile squads culture to safeguard the shopping experience and functional stability of leading retail platforms.

Senior QA Engineer — Contract — Sinergia Studios

10.2019 · 05.2021

Responsible for establishing the Quality Assurance function at the startup, structuring from scratch every process and standard. Led the testing strategy during the full rebuild of GoGame 2.0 and the strategic launch of GoGame 3.0, as the main owner of software-lifecycle integrity. Implemented mobile automation with Robot Framework, Appium and TestProject, combined with rigorous manual testing and defect management via Jira — delivering a stable, high-performance product to market.

Senior API Test Consultant — Contract — FagronTech Brasil

05.2019 · 10.2019

As Senior Consultant at FagronTech — an ERP specialised in compounding pharmacies — led the quality strategy in a highly regulated, data-intensive environment. Owned API validation with Postman, Newman and Swagger, and implemented a performance-testing culture using k6. Acted directly on system sustainability through message-broker monitoring (RabbitMQ) and management of CI/CD pipelines across staging and production, ensuring safe deployments and integrity of critical ecosystem integrations.

Senior Test Consultant — PJ — Deal Technologies

05.2018 · 05.2019

Consulting role on strategic digital-transformation projects for the loyalty and marketplace sectors (Compra Agora and LTM Fidelidade). Focused on microservices architectures, led quality assurance through rigorous REST API testing with a modern stack (Cypress, Postman, Newman). Owned the full testing lifecycle and continuous integration inside the Azure DevOps ecosystem, enabling agile delivery and the stability of high-throughput transactional platforms.

Mid-Level QA Engineer — PJ — Auto Avaliar

09.2017 · 05.2018

Acted on the strategic structuring of the platform's quality ecosystem, co-architecting a robust web automation framework. Developed automated test suites with Selenium and Selenide, integrating them into Jenkins Continuous Integration pipelines with end-to-end custom reporting. On the mobile side, led automation of the vehicle-appraisal app using Appium and Cucumber, applying BDD practices to guarantee the reliability of inspection, buying and selling flows.

Mid-Level QA Engineer — CLT — Capgemini Brasil

06.2017 · 09.2017

Worked on a strategic project for the Banco Bradesco mobile app, focused on quality of high-visibility components. Used the bank's proprietary framework for mobile automation (Appium + Java) and API testing. Owned complex scenario mapping through mind maps and managed the test lifecycle in ALM Octane and Jira. Operated a robust development environment using Bitbucket, Bamboo (CI) and Mobile Center for testing on real devices.

Mid-Level QA Engineer — CLT — Pixon Medical System

04.2016 · 06.2017

QA Engineer at Pixon, a HealthTech reference, ensuring quality of mission-critical systems for hospitals and clinics. Led end-to-end automation of Web and Desktop applications using Java and Selenium to validate the exam-results delivery flow in SmartWeb. Mitigated risk through rigorous manual testing and complex ticket resolution, using Jira for defect management and safeguarding the reliability of solutions that directly impact patient care.

Junior QA Engineer — CLT — Fraunhofer Project Center

07.2014 · 04.2016

QA Engineer at Fraunhofer Project Center, assigned to the Brazilian National Transplant System (SNT) project at the Bahia Technology Park. Owned quality assurance of critical organ-donation flows, where precision and system availability are vital. Working in close collaboration with the engineering team, managed bug triage and lifecycle via Mantis, basing test strategy on complex requirements and strict business rules to safeguard the integrity of one of Brazil's most essential healthcare platforms.

Junior QA Engineer — CLT — Brisa R&D – LG Mobile

12.2010 · 07.2014

Worked at Brisa R&D validating LG mobile devices in pre-launch stage (K, Q, V and Stylo product lines). Ensured hardware and software quality through rigorous performance, UI and native-app functional testing. Contribution was decisive to certify device compliance before large-scale production. Also specialised in FOTA (Firmware Over the Air) update protocols — topic deepened in the undergraduate thesis — building a strong foundation on device lifecycle and connectivity.

Junior QA Analyst — Softwell Solutions Ltda.

11.2009 · 12.2010

Development, maintenance and testing of projects and systems on MAKER ALL. Tested the MAKER ALL EXTREME 3.0 platform and MAKER MOBILE (iOS and Android), WebRun Java and WebRun .Net. Managed analysis, case studies, checklists, bug tracking and user support.

CakePHP Developer — .COMPOS

03.2009 · 11.2009

Project development (schedule, requirements, management, deadlines) using the CakePHP 2.0 framework with PostgreSQL 9, JavaScript, jQuery, AJAX, XML and HTML. Software testing (white/black box, regression) with PHPUnit/PEAR and PSP-based development.

PHP Developer — Caixa Econômica Federal

05.2008 · 03.2009

Developed PHP systems on demand. Configured and maintained servers. Documented and migrated existing programs to the web platform using SQL Server and Microsoft Access databases.

Key Projects (Founder)

WasteZero: WhatsApp-native circular economy marketplace turning waste into value.

A platform that turns surplus and near-expiry stock into sales: the merchant photographs an item, AI (Google Gemini) writes the title, description, category and price, and the offer goes live in the store's own online shop with progressive discounts and discounted reveal bags. It automates Instagram and WhatsApp promotion, real-time sale alerts, PIX confirmation via Mercado Pago Connect, and funnel analytics. pnpm monorepo with Next.js 14, Fastify and MongoDB, multi-tenant and trilingual.

Stack: Next.js 14, React, TypeScript, Tailwind CSS, Node.js, Fastify, MongoDB, Google Gemini (IA), Cloudflare R2, Mercado Pago, Instagram Graph API, Playwright

Juntix - Fintech for Collaborative Credit Management

SaaS platform that organizes and automates collaborative savings groups — members contribute monthly and, each month, one of them receives the pooled amount. Juntix holds no customer funds: it acts as an intermediation and automation layer, with every financial movement settled by BACEN-regulated payment providers (Lytx and Woovi), including automatic split between member, group administrator and platform.

Stack: React, TypeScript, Vite, TailwindCSS, NestJS, Node.js, MongoDB, Mongoose, Redis, BullMQ, Docker, JWT, Pix (Lytx/Woovi), Stripe, WhatsApp API, Claude AI, Tesseract OCR, Cloudflare R2, Jest, Playwright, GitHub Actions

CRUZZO - P2P marketplace for mentorships and field tasks with escrow payments

A P2P marketplace connecting people who are migrating (Cruzzers) with verified local residents (Landers): video mentorships and paid field tasks, with the money held in escrow until the delivery is approved. Pilot in Ciudad del Este, Paraguay.

Stack: Next.js 14 (App Router), React 18, TypeScript, Tailwind CSS, Node.js, MongoDB Atlas, Mongoose, JWT (jose), WebRTC, Cloudflare R2, Docker, Monorepo (npm workspaces), Didit (KYC), Google OAuth 2.0 / OpenID Connect, reCAPTCHA v3, Recharts, i18n (pt-BR/es/en)

Education & Certifications

- **[Certification] ISTQB Certified Tester – Foundation Level (CTFL)** — ISTQB (2014 – 2030)
- **[Certification] Scrum Foundation Professional Certification (SFPC)** — CertiProf (2014 – 2030)
- **[Certification] DevOps Essentials Professional Certificate** — DevOps Essentials – Credly.com (2014 – 2030)
- **[Academic] Bachelor of Information Systems** — UNIME – Metropolitan Union of Education and Culture (2010 – 2017)

Community & Languages

- Founder of **ISSQA** – Quality Engineering consultancy and technical mentoring.
- Delivers free QA fundamentals classes to youth in the local community.
- Youth group leader and Sunday-school teacher.
- **Languages:** Portuguese (native), English (professional).
